# Haocheng Wang

Communication University of China, No. 1, Dingfuzhuang East Street, Chaoyang District, Beijing, China, 100024
Tel: +86 18551651018 Email: 202427103014Z@mails.cuc.edu.cn

Undergraduate researcher specialising in computational social science, AI-mediated communication, and human-machine communication. Examined how AI becomes visible in journalism and public discourse, including AI bylines, institutional trust transfer, semantic downgrade of agent-related vocabulary, and AI-to-AI information cascades.

## EDUCATION

**Communication University of China (CUC)**
**Nottingham Trent University (NTU)** **09/2024 – 06/2028**
BA Advertising (CUC) & BA Communication (NTU) (Dual Degree) (GPA: 3.78/4.0)

- Ranked 1st in the Student Comprehensive Evaluation.
- Relevant Modules: Introduction to Communication Studies, Introduction to Digital Marketing, Smart Media Communication, Consumer Behaviour, New Media and Digital Culture, Creative Strategies in the Age of Smart Media.

## RESEARCH INTERESTS

**Keywords:** Intelligent Communication, Human-Machine Communication, Computational Communication, Interdisciplinary AI Communication, Quantitative Research

- Applies quantitative and computational methods — experiments, surveys, computational text analysis, and machine learning — to examine machine agency, user cognition and trust, and algorithmic decision-making.
- Integrates communication studies, human–computer interaction, and computer science to inform intelligent communication theory, AI design, and governance.

## RESEARCH EXPERIENCE

**Research on Generative AI Literacy, Platform Governance, and User Behaviour** **08/2026 – Present**
Remote Research Assistant, University of Miami

- Conducted comparative research on generative AI literacy and social media platform governance, examining AI literacy, policy perception, trust, and user behaviour across platforms.
- Led comprehensive literature reviews, selected and compared established Generative AI Literacy scales, and operationalised research variables.
- Designed surveys and experimental frameworks with reliability and validity testing and regression/moderation analyses, and developed a comparative governance framework for platforms such as Instagram and Xiaohongshu.

**Model-Based Video Annotation Agent** **08/2026 – Present**
Remote Research Assistant, University of Miami

- Developed an AI agent for systematic annotation and coding of TikTok videos, enabling scalable analysis of short-form digital content.
- Implemented a psychology-informed coding framework to classify video content according to predefined behavioural and contextual variables.
- Integrated large language models into the annotation workflow, improving consistency and efficiency in qualitative video analysis.

**Research on Intelligent Agents and Multi-Agent Collaboration Mechanisms: Development of Public Opinion Agents** **07/2026 – Present**
Project of CUC State Key Laboratory of Media Convergence and Communication

- Developed public opinion agents for intelligent communication and human–machine collaboration scenarios, designing task division, context sharing, information exchange, and collaborative decision-making among agents with varying capabilities.
- Built agent systems through literature review, benchmark formulation, and experimental design for long-term tasks, evaluating performance with metrics such as task success/accuracy, token cost, and wall-clock latency.

## PUBLICATIONS & CONFERENCE PRESENTATIONS

**Wang, H.** (2026). Authority Erosion and Agency Deficit: Examining Algorithm Aversion Toward AI-Authored News and Its Boundaries in the Chinese Context. *International Association for Media and Communication Research (IAMCR) 2026 Conference.*

- Investigated the impact of algorithm aversion on the credibility of AI-authored news in China, and explored the interplay of media type, news type, and individual attitudes towards AI.
- Designed and conducted a 2 (media type) × 2 (author attribution: AI/human) mixed experimental design (N = 327), with news type (hard/soft) as a within-subjects factor, analysed using mixed-design ANOVA and linear mixed-effects models.
- Established that AI author attribution significantly diminished news credibility, with institutional authority failing to mitigate this effect; AI signatures in soft news elicited stronger negative responses related to perceived agency.

- Showed that attitudes towards AI significantly modulated algorithm aversion, while no statistically significant moderating effects of educational or professional background were observed.

**Wang, H.** (2026). The Transparency Paradox in Algorithmic Governance: How AI Disclosure Redistributes Institutional Trust in China. *2026 International Communication Association (ICA) Beijing Regional Conference.*

- Examined whether generative AI content disclosure enhances transparency and public trust within China's media environment, and focused on the relationship between institutional authority, AI attribution, and news credibility.
- Isolated the interaction between media type (state-affiliated vs commercial) and authorship disclosure (human vs AI) within the shared N = 327 experiment, with comparisons across hard and soft news.
- Identified audience AI attitudes as a key moderator and developed the concept of the "transparency paradox" to explain how AI disclosure redistributes trust between institutions, machines, and audiences.

**Wang, H.** (2026). The Immovable Anchor: Why Institutional Authority Cannot "Transfer" Trust to AI Agents. *2026 International Intelligent Communication Academic Forum (ICA).*

- Investigated whether institutional authority and credibility possessed by traditional media organisations can be transferred to AI agents, and developed the "Immovable Anchor" framework to explain the limitations of trust migration in AI journalism.
- Supplemented the shared N = 327 experiment with additional responsibility-attribution measures, applying repeated measures modelling and moderation regression analysis.
- Demonstrated that institutional authority increases baseline news credibility but fails to provide a stable trust shield for AI-generated content, and revealed the role of responsibility ambiguity and weakened accountability anchoring in AI-mediated communication.

**Wang, H.** (2026). The "Hollow" Mediator: How AI-Generated News Reshapes Meaning-Making and Audience Connection. *NCA Xiamen Summit: Global Communication and Global Governance.*

- Developed the concept of a "Hollow Mediator" and proposed that AI-mediated news can weaken meaning-making and audience connection by lacking experienced subjectivity, affective grounding, and relational anchoring.
- Combined the shared experimental design (N = 327) with computational textual analysis, comparing AI-agent community content (Moltbook) with Reddit human corpora and operationalising “hollowness” through lexical diversity, sentiment dispersion, concreteness/abstractness, and discourse markers.
- Found that AI attribution significantly reduces credibility and that AI texts show semiotic features such as semantic sparsity, flattened affect, and de-embodiment, bridging audience trust judgements with language-level textual representations.

**Wang, H.** (2026). Manufacturing Anxiety: Transnational Semantic Downgrade and Media Hype of "Agent Skills". *2026 International Communication Association (ICA) Beijing Regional Conference.*

- Investigated the semantic transformation of emerging AI terminology, including Agent, Workflow, MCP, Prompt, and Skill, within public news discourse from a computational communication perspective.
- Constructed and analysed a cross-regional corpus of 5,856 news articles to compare narratives of Agent technologies across the Global North and Global South.
- Applied computational methods including word co-occurrence networks, corpus normalisation, bootstrap resampling, weighted Louvain community detection, betweenness centrality analysis, and a novel Semantic Downgrade Index (SDI).
- Demonstrated how technological terms become associated with socio-economic narratives such as employment, income, replacement, opportunity, and anxiety, operationalising semantic downgrade as a measurable cross-cultural communication phenomenon.

**Wang, H.** (2026). AI Communication as a Pseudo Event: Landscape Production, Capital Logic and Media Myth in Moltbook. *The 6th Social Robotics Forum, 2026.*

- Investigated Moltbook, an A2A (Agent-to-Agent) forum built on the OpenClaw framework, to examine the capital, power, and media production logics underlying AI agent-based social landscapes.
- Applied theories of the Society of the Spectacle, pseudo-events, and "the medium is the myth" to analyse emerging forms of AI communication and technological narratives.
- Combined computational forensics and digital ethnography to identify anomalous activity, potential human intervention, and discourse strategies through network topology and temporal analysis.
- Revealed how AI social landscapes transform interaction into a displayable and financialisable media spectacle, exposing the technological myths and capital dynamics embedded in Agent communication.

**Wang, H., & Gong, J. (2026).** From Conflict to Coordination: Policy Discourse and Negotiated Governance of Generative AI in Cultural Industries. *International Conference on AI, Technology, and Emerging Media (AIEM 2026), Hong Kong Baptist University, Hong Kong, 16 – 18 October 2026.* Accepted for presentation.

- Analysed 205 Chinese and US policy texts using LDA topic modelling, phrase association, actor–governance relationship analysis, and case coding to examine conflict and coordination in generative AI governance in cultural industries.

**Wang, H., & Gong, J. (2026).** When Machines Compose: Generative AI Literacy, Governance Judgments, and User Responses to AI-Generated Music. *International Conference on AI, Technology, and Emerging Media (AIEM 2026), Hong Kong Baptist University, Hong Kong, 16 – 18 October 2026.* Accepted for presentation.

- Combined a survey of 196 Douyin users with interviews with two music professionals to examine relationships among generative AI literacy, perceived governance fairness, and intentions to report AI-generated music.

## PROFESSIONAL EXPERIENCE

**Beijing Zhigeng Vision Technology Co., Ltd. |** Beijing, China **11/2025 – Present**
Founder & CEO

- Led the MeetFlow AI digital employee collaboration platform from inception, personally responsible for product definition, requirement validation, and commercial exploration.
- Led user research, PRD creation, and core interaction design, covering multi-agent task routing, long-term memory, cross-agent context, and knowledge retention.
- Managed business planning, pricing strategies, funding materials, and market launch, validating practical demand for digital employees in research, marketing, and enterprise services through user interviews and product testing.

**China Media Group (CMG) |** Beijing, China **01/2025 – Present**
New Media Director / Content Production Intern

- Contributed to content planning, new media distribution, and AIGC visual production for CCTV Music Platform and CCTV-15 programmes.
- Drove projects achieving over 15 million cumulative views across platforms, with the highest-performing single piece reaching 5.27 million views.

**AIGC Video Production for Guangming Online News Platform** **03/2025 – 02/2026**
Lead Planner & Producer

- Led end-to-end planning and production of four AIGC-driven news videos covering emerging industries of state-owned enterprises, new quality productive forces, consumer scenarios, and regional economic development.
- Translated complex policy topics into structured visual narratives and integrated generative AI tools with editorial workflows and news storytelling; productions were featured on the homepage of Guangming Online's Economic Channel.

**ByteDance |** Beijing, China **11/2024 – 01/2025**
Editorial Intern

- Contributed to nationwide university campus campaign planning, campus communications, and offline event execution, driving 5,000+ student participation.
- Produced community promotional content and conducted post-campaign reviews by analysing student feedback and engagement performance.

## EXTRACURRICULARS

**CUC Innovation and Entrepreneurship Association**
Director

- Oversaw team management, event development, communications strategy, and project execution.
- Developed strong organisational, leadership, and cross-functional communication skills.

## AWARDS & QUALIFICATIONS

- **First Prize (National Level), National Advertising Art Design Competition for College Students** **2026**
- **2nd Prize,** Provincial Level, "Challenge Cup" National College Students Competition **2026**
- **3rd Prize,** Provincial Level, "Challenge Cup" National College Students Competition **2026**
- **Excellence Award,** Video Category, China College Students Advertising Design Festival Campus Award (3 times) **2025 – 2026**
- **Excellence Award,** Marketing & Communication Category, China College Students Advertising Design Festival Campus Award **2025 – 2026**
- **Excellence Award,** AI Short Film Competition, Beijing International Audiovisual Conference **2025**
- **3rd Prize,** "Xiao Clarins" Brand Creative Design Competition **2025**
- **Approved Project,** Municipal Level, College Students Innovation and Entrepreneurship Training Programme **2025**
- **Approved Project,** University Level, College Students Innovation and Entrepreneurship Training Programme (2 times) **2025**
- **Quarterfinalist,** The Hong Kong University of Science and Technology AIGC Film Festival **2024**

## SKILLS & LANGUAGES

- **Research Abilities:** Quantitative research, questionnaire design, experimental design, and computational text analysis.
- **AI Skills: Hands-on experience in developing and applying AI agents and LLM-based workflows for research annotation and content production; skilled in AI-assisted coding (e.g., Claude Code, Codex) and prompt engineering.**
- **Media Production:** Skilled in short video planning, filming, editing, and AIGC visual production; proficient in tools including Final Cut Pro, After Effects, Photoshop, Lovart, and Veo.
- **Languages:** English (Fluent), Mandarin (Native).
